

Analysing Data In Excel

1. Project 1 - Content Engagement Analysis

Objective: Analyse how different types of posts perform in terms of engagement.

Dataset: Collected data from personal LinkedIn posts including impressions, likes and comments.

Steps Taken: Organised data into a structured table, calculated engagement rate, created a bar chart comparing post types

Cleaned data to ensure consistency

Key Insight: Video posts generated higher impressions compared to text-based posts

Engagement Rate Calculation:

SUM	▼	✖	✔	<i>fx</i>	▼	=(E2+F2)/D2		
	A	B	C	D	E	F	G	H
1	Data	Post Type	Topic	Impressions	Likes	Comment	Engagement Rate	
2	01-Apr	Video	Flex Grow Demo	1200	15	3	$=(E2+F2)/D2$	

Bar Chart: Shows the number of impressions given the post type

2. Project 2 – Sales Analysis

Objective: Analyse sales performance across different products and categories

Dataset: Sample dataset including product, category, price, quantity and total sales.

Steps Taken: Created structured dataset in Excel

Calculated total sales using formulas.

Used Pivot Tables to summarize sales by product

Cleaned data using TRIM to remove inconsistencies

Created bar chart to visualize results

Key Insight: Sneakers generated the highest total sales, making it the top performing product.

Tools And Operations Used: Excel, Pivot Tables, VLOOKUP, SUMIFS, Data Cleaning (TRIM)

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
1	Date	Product	Category	Price	Quantity	Total Sales	Column								
2	01/04/26	T-Shirt	Clothing	15	2	30	Shoes	160	1	40					
3	01/04/26	Shoes	Footwear	40	1	40		4							
4	02/04/26	Jeans	Clothing	30	1	30		360							
5	02/04/26	Hat	Accessory	10	3	30									
6	03/04/26	T-Shirt	Clothing	15	1	15									
7	03/04/26	Sneakers	Footwear	50	1	50		Shoes Price		Shoes Total Sales					
8	04/04/26	Jacket	Clothing	60	1	60		40		1					
9	04/04/26	Belt	Accessory	12	2	24									
10	05/04/26	Shoes	Footwear	40	2	80		Jacket Price							
11	05/04/26	T-Shirt	Clothing	15	3	45		60							
12	06/04/26	Hat	Accessory	10	2	20		Sneakers Category							
13	06/04/26	Sneakers	Footwear	50	1	50		=VLOOKUP(B7,Table13[[Product]:[Category]], 2, FALSE)							
14	07/04/26	Jeans	Clothing	30	2	60		VLOOKUP(lookup_value, table_array, col_index_num, [range_lookup])							
15	07/04/26	Belt	Accessory	12	1	12		Footwear							
16	08/04/26	Jacket	Clothing	60	1	60									
17	08/04/26	Shoes	Footwear	40	1	40									
18	09/04/26	T-Shirt	Clothing	15	2	30									
19	09/04/26	Hat	Accessory	10	1	10									
20	10/04/26	Sneakers	Footwear	50	2	100									
21	10/04/26	Jeans	Clothing	30	1	30									
22															

06/04/26	Hat	Accessory	10	2	20	Sneakers Category				
06/04/26	Sneakers	Footwear	50	1	50	Footwear				

Here we use VLOOKUP to lookup the category that sneakers is associated too, B7 is the lookup value, the product column and category column represents the table array dataset, the column index number is 2 since we

want to find the category and the range lookup is FALSE as we are after an exact match.

SUM		:		=SUMIFS(Table13[Total Sales],Table13[Product],G2)													
	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O

22							

New Column added to trim product column to ensure any additional whitespaces are removed as this will be a column used for our pivot table.

The screenshot displays an Excel spreadsheet with a PivotTable. The PivotTable is structured as follows:

	Product	Sum of Total Sales
Belt	Product1	36
Hat	Product1	60
Jacket	Product1	120
Jeans	Product1	120
Shoes	Product1	160
Sneakers	Product2	200
T-Shirt	Product2	120
Grand Total		816

The PivotTable Fields task pane on the right shows the following configuration:
